Morning, David-

We never have made use of the Element packaged Scribe EDD. Just use an in house EDD created with the EDD builder. If you have created a SEDD EDD for Scribe, it probably has a lot more info than ours.

As more info/requirements for sampling and analyses becomes available, a format should be created based on whatever R8 needs.

Hey Greg,

We've only created and submitted SEDD EDDs for Scribe. I also ran a test using the EPA Scribe EDD in Element and the resulting EDD was a .txt file.

Greg:

Element does have an option in their EDD library for generating "EPA Scribe" EDDs. We have not generated a Scribe EDD that we have sent to any customers, so I have never received any feedback regarding whether or not the Scribe EDDs generated by Element in this format are compliant or have problems. I did just create an EDD using the "EPA Scribe" option using some old metals results and the system did generate a file, so at least that's encouraging.

Dear LIMS users-

By now you may have seen or read about the accidental discharge along the Animas River in Colorado. Scribe is the requested data format for the inter-regional assistance project.

Can you get in touch with me if you have Promium LIMS and have used Scribe?

Thank you,

Greg
